

Our Functional Core Competencies

Functional Core Competencies

are capabilities that reside **throughout CACI**. They demonstrate the **end-to-end value** we provide and the **distinctive resources** available throughout the company.

Enterprise IT and Network Services

We support our clients' critical networked operational missions by providing tailored end-to-end enterprise information technology (IT) services for the design, establishment, management, security, and operations of client infrastructure. Our operational, analytic, consultancy, and transformational services effectively use industry best practices and standards to enable and optimize the full lifecycle of the networked environment, improve customer service, improve efficiency, improve security, and reduce total cost and complexity of large, geographically dispersed operations.

Data, Information and Knowledge Management Services

We deliver a full spectrum of services and solutions that allow our customers to automate the knowledge lifecycle from data capture to information understanding. We apply CMMI® Level 3 best practices to provide solutions based on integrated commercial products, custom development, and support systems operations and maintenance. Our information technology solutions are complemented by a suite of analytical expertise support offerings for our customers in the Intelligence Community, Department of Defense, Department of Justice, and Department of Homeland Security.

Business System Solutions

We provide solutions that address the full spectrum of requirements in the financial, procurement, human resources, and supply chain domains. Our solutions employ an integrated cross-

functional approach to maximize investments in existing systems, while leveraging the potential of advanced technologies to implement new, high-payback solutions. Our offerings include services, consulting, and software integration, supporting the full lifecycle of commercial technology implementations from blueprint through application sustainment.

Logistics and Material Readiness

We offer a full suite of solutions and service offerings that plan for, implement, and control the flow and storage of goods, services, and information in support of U.S. government agencies. We develop and manage logistics information systems and simulation and modeling toolsets, and provide logistics engineering services. Our operational capabilities span the supply chain, including logistics advance planning, demand forecasting, total asset visibility (including the use of RFID), and lifecycle support for weapons systems. Our logistics services are a critical enabler in support of peacetime readiness and combat sustainability objectives.

C4ISR Integration Services

We provide rapid response services in support of military missions in a coordinated and controlled operational setting. We support military efforts to ensure delivery and sustainment of integrated, enterprise-wide command, control, communications, computers, intelligence, surveillance, and reconnaissance (C4ISR) programs. We integrate sensors, mission applications, and systems that connect with Department of Defense data networks.

Cyber Security, Information Assurance, and Information Operations

Our solutions and services support the full lifecycle of preparing for, protecting against, detecting, reacting to, and actively responding to the full range of cyber threats. We achieve this through comprehensive and consistently managed, risk-based, cost-effective controls and measures to protect information and systems operated by the U.S. government. We proactively support the operational use and availability/reliability of information.

Integrated Security and Intelligence Solutions

The United States, our partners, and allies around the world face state, non-state, and transnational adversaries that do not recognize political boundaries, are not bound by international law, and will seek, through asymmetric and irregular means, ways to strike at seams in our national security. We assist clients in developing integrated solutions that close gaps between security, intelligence, and law enforcement in order to address complex threats to our national security.

Program Management and SETA Support Services

We support program offices with comprehensive management processes that optimize program resources. This includes translating requirements into configured systems, integrating technical inputs, characterizing and managing risk, transitioning technology, and verifying that designs meet end-users' operational needs. Additionally, we provide key program management and systems engineering and technical assistance (SETA) services that include contract management support, operations support, architecture and systems engineering, project and portfolio management, strategy and policy support, and complex trade analyses.

CACI International Inc provides the professional services and IT solutions needed to prevail in today's defense, intelligence, homeland security and federal civilian government arenas. CACI services and solutions help our federal clients provide for national security, improve communications and collaboration, secure the integrity of information systems and networks, enhance data collection and analysis, and increase efficiency and mission effectiveness. We add value to our clients' operations, increase their skills and capabilities, and enhance their missions. CACI is a member of the Fortune 1000 Largest Companies and the Russell 2000 index. CACI provides dynamic careers for approximately 12,400 employees working in over 120 offices in the U.S. and Europe. CACI is the IT provider for a networked world.
