

DevSecOps

Delivering Capability at the Speed of Mission

CACI partners with our customers to infuse speed and agility into software delivery through implementation of DevSecOps. The integration of DevSecOps into the development lifecycle leads to accelerated capability delivery, increased deployment frequency, automated risk categorization, and software updates and patches at the speed of mission. Effective DevSecOps shortens the development lifecycle by focusing on smaller, more frequent changes and reducing the number of handoffs between teams. Such an approach prioritizes the delivery of new features to end users, while shortening feedback loops and continually identifying and elevating constraints as candidates for remediation.

CACI understands how to help organizations adopt a DevSecOps culture. Our expertise and solutions lower the barriers to entry, and build the integration, collaboration, and transparency that powers a successful DevSecOps implementation. Whether that's implementing DevSecOps processes across multiple networks and security domains, for enterprise resource planning (ERP) implementations, or development of enterprise and mission applications, our customers achieve authority to operate (ATO) in days or weeks instead of months. We automate processes in adherence with data governance guidelines to deliver functionality at a higher velocity. Our customers realize efficiencies in cost and time savings while also delivering new capabilities to end users faster, more securely, and reliably. Achieving DevSecOps is not a slow evolution to improved efficiency and agility – it is a revolutionary shift in culture and process. We provide compliant, secure software; a flexible, integrated, solution-oriented environment; and the expertise needed for successful, effective DevSecOps transformation and delivery at scale while complying with the U.S. Government, Department of Defense and Intelligence Community (IC) milestone gates.

A *Fortune* World's Most Admired Company

EXPERTISE AND TECHNOLOGY FOR NATIONAL SECURITY

CACI
EVER VIGILANT

Features

- Significant domain expertise in implementing enterprise DevSecOps processes at scale
- Common software development environment (CSDE) solution
- Automated maturity assessment
- Rapid ATO processes with automated accreditation
- Experience implementing DevSecOps for ERP and enterprise and mission application development
- Expertise and strategic partnerships with Amazon Web Services, Microsoft, Docker, GitLab, Kubernetes, and other leading technology providers
- Industry-leading Agile Solution Factory (ASF)
- RMF Eagle risk management framework and automated STIG assessment solution
- Infrastructure as a service (IaaS), platform as a service (PaaS), and software as a service (SaaS)
- Flexible delivery models including managed services offering

Benefits

- Integrated culture of security, IT, and operations enables secure, rapid software deployment
- CACI's CSDE solution provides managed services, tools, environment, and enterprise service offerings for rapid deployment

DevSecOps Transformation for the Enterprise

Low to high side development and implementation of DevSecOps for an IC customer has enabled ATO in less than two weeks

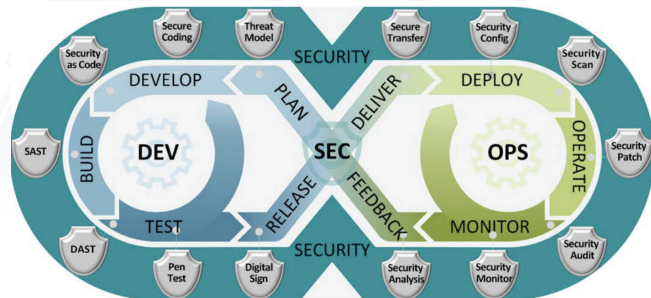

Assisted an IC customer to be the first at its agency to achieve ATO and transition operations to the cloud

Delivered automated DevSecOps workflows implementing infrastructure as code, continuous integration, automated testing, continuous delivery, release management, performance monitoring, and auto scale for a Department of Defense customer

Automated continuous integration reduced installation time from five days to two days for the Army National Guard
