DARKBLUE INTELLIGENCE SUITE

Unlock new leads with CluesAI

CluesAI: automated summarization and deanonymization to enhance your investigations

Meet CluesAI, your new automated investigative assistant. Powered by generative AI, with best-in-class Anthropic Large Language Models (LLMs) and the power of AWS Bedrock, CluesAI harnesses the powerful data of the DarkBlue® Intelligence Suite to enable faster deanonymization of dark web threat actors.

Rather than manually combing through DarkBlue records for email addresses, PGP keys, and other potentially useful data, then manually cross-referencing each one, let CluesAI do it for you. In one click, return a summary of site activity and a report showing what potentially deanonymizing data CluesAI was able to cross-reference from relevant DarkBlue records. Save time by ruling out dead ends and quickly retrace breadcrumbs.

CluesAI cites its sources, so you can check its work and easily pivot to the records used in its report.

QUICKLY GENERATE AN ACTIONABLE REPORT

With CluesAI, quickly get a summary of site activity, so you know whether a site is worth further investigation. In that same report, learn what pieces of potentially deanonymizing information were uncovered in connected DarkBlue records.

You can also use CluesAI to run a versions report. This analyzes previous versions of a site and returns information on what has changed over time, making connections to reveal potentially deanonymizing information that is now hidden.
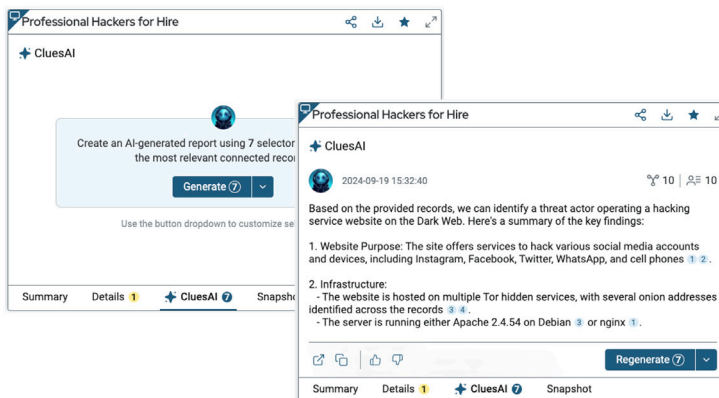

FILTER FOR SPECIFIC DEANONYMIZING FIELDS

CluesAI works by cross-referencing our database for specific fields that might help deanonymize threat actors. You can filter for any records that are CluesAI-enabled, or you can filter down to only the ones that interest you:

- Email addresses
- IP addresses
- PGP keys
- Analytics IDs
- Crypto SSH fingerprints
- Vendor names
- Infrastructure configuration details

- Crypto:
  – Bitcoin
  – Monero
  – Litecoin
  – Ethereum
  – Solana
  – Tron
  – OFAC Sanctioned

GET VERIFIABLE RESULTS

We know you need to check our work and trace our steps. That's why CluesAI cites its sources. You can see all the connected records used in your report or use the view evidence function to pivot to all the cards in search view. With CluesAI, the information you need isn't hidden, it's highlighted.

ABOUT CACI'S DARKBLUE INTELLIGENCE SUITE

CACI's DarkBlue Intelligence Suite is the established leader in dark web exploitation. Our mission-focused technology, analyst-led training, and tailored services empower clients to operate within hidden portions of the information environment effectively. DarkBlue provides national security, intelligence, and law enforcement communities with safe, persistent, and holistic access to identify, target, and track dark web threat actors globally.
